**Setting Up Your Account**

Prior to using a bulk water fill station for the first time, customers must set up an account for access purposes and submit to a water fill tank inspection. Water is purchased using a pre-paid card. Customers will be required to complete and submit a Bulk Water Fill Station Water Use Permit.

Account set-up can be completed at Skagit PUD’s office during normal business hours, Monday – Friday, 8 a.m. to 5 p.m. There is a $30 one-time charge for setting up an account. A $30 fee will be charged to replace a lost or damaged card.

Accounts can be re-filled by calling Customer Service with a credit card number. You may also pay with check or cash at Skagit PUD’s office. The water rate is $0.0043 per gallon.

**Parts & Fittings**

Customers using the bulk water station will need a **two-inch hose with a female camlock fitting**. These fittings can be purchased from many local retailers.

Water provided by fill stations after passing the meter is not warranted by Skagit PUD as suitable for domestic/potable use.

**Conway Fill Station**
Conway Fire Station
21020 Greenfield Street | Conway

**Sedro-Woolley Fill Station**
24972 Minkler Road | Sedro-Woolley
24-Hour Bulk Water Fill Station

Skagit Public Utility District’s bulk water fill stations are sites where commercial business, agricultural operations and the general public can purchase large volumes of water at easily accessible locations. Skagit PUD operates three bulk water fill stations and allows for 24-hour daily access to bulk water. Customers can fill smaller tanks up to and including large commercial tanker trucks. The easy access terminal provides security and ease of use.

How to Operate Fill Station

1. Remove cap from fill station outlet and ensure fill hose is in place before accessing the control panel.

2. Swipe pre-paid card.

3. Type in desired number of gallons.

4. Push ENTER to begin filling.

The entry screen will display the following information:

- Balance of funds remaining on card.
- Dollar amount and volume accruing as water is pumped into your storage tank.
- Final water charge at completion of transaction.

Pump Operation

Pumping stops when quantity entered is reached or “stop” is pressed. You are charged for the amount of water you have accessed from the system, not the amount that is entered. In instances where “stop” is pressed prior to your entered fill amount, you will be charged for the actual amount used and not the entered fill quantity.

Due to the time it takes for the valve to close, actual water volume delivered will be approximately 20 gallons more than the amount selected at the pump.

For example, if you are filling a 500 gallon tank, then you will want to enter 480 gallons on the screen. As the valve closes, it will top off your tank at approximately 500 gallons. You will be charged for the actual amount used and not the entered fill quantity.

Use Restrictions

Water provided by fill stations must be beneficially used within Skagit PUD’s approved service area.

Non-compliance with the terms and conditions of a fill station permit may result in revocation of fill station approval and/or denial of future access.
